#### Search Notes

Examiner Qian,

Here are the results of the search you requested.

Please feel free to contact me if you have any questions.

**Edward Hart**

# STIC SEARCH RESULTS FEEDBACK FORM

#### Biotech-Chem Library

Questions about the scope or the results of the search? Contact the searcher or contact:

Mary Hale, Information Branch Supervisor Remsen Bldg. 01 D86 571-272-2507

V U	umary results reedback rom
>	I am an examiner in Workgroup: Example: 1610
· >	Relevant prior art found, search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	☐ Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	☐ Foreign Patent(s)
	<ul> <li>Non-Patent Literature</li> <li>(journal articles, conference proceedings, new product announcements etc.)</li> </ul>
>	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.
Cor	mmente

Isolated nucleic acid having expression vector construct with vascular endothelial growth factor-2 insert, useful for treating chronic limb ischemia or myocardial ischemia, autoimmune disorders and allergic conditions.

Disclosure; Fig 31; 241pp; English.

The invention relates to an isolated nucleic acid comprising pVGI.1 expression vector construct containing the vascular endothelial growth factor 2 (VEGF-2) insert. The nucleic acid is useful for producing a host

Transgenic plant, insect resistance; cry2Aa delta-endotoxin, Coleopteran, Lepidopteran, Dipteran, plastid transit peptide; zmSSU PTP; insecticidal; plasid targeting peptide; pMON30464 plasmid; expression vector; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bacillus thuringiensis produce delta-endotoxins during sporulation. These proteins are toxic to certain insects e.g. Lepidopteran and Coleopteran larvae. An insect-resistant transgenic plant has been constructed which contains the delta-endotoxin cry2Ab gene. The present sequence would be used to transfer delta-endotoxin genes into plant cells and for subsequent high expression of the cry2Ab gene. Protection may be attained against insects such as Ostrina spp., Diatraea spp., Helicoverpa spp., Pectinophora spp., in Gas mays; Heliothis virescens, Helicovera spp., Pectinophora spp., in Gossypium histutum, Anticarsi spp., Pseudoplusia spp., Bpinotia spp., in Gyssypium histutum, Anticarsi spp., Pseudoplusia spp., Epinotia spp., in Gycsypium histutum, Anticarsi spp., Pseudoplusia spp., protein comprising an amino-terminal plastid transit peptide (zmsSu Prp) covalently linked to the delta-endotoxin. The fusion protein functions to localise the delta-endotoxin to a subcellular organelle or compartment

This is the nucleotide sequence of the termamyl-linker-CBDEGV fusion construct pNAMK6.1. This is an enzyme hybrid which can be used for the cinquefaction of starch. The enzyme hybrids contain amino acid sequences of alpha-amylase linked to a cellulose binding domain (CBD). The CBD is selected from the Bacillus or cellulomonas endoglucanase, C. xylanase A or the Humicola insolens EGV sequence. The starch is liquefied by treating, in aqueous medium with such an enzyme hybrid. A recombinant expression vector comprising a construct containing isolated DNA encoding enzyme hybrids with amylolytic activity, promoter and stop signals can be usyme hybrids. The enzyme hybrids are useful in industrial starch processing especially for the production of sweeteners. Hybrid enzymes have altered affinity for substrate and increased activity, resulting in at least 1 of reduced calcium ion dependence, reduced formation of Maillard reaction products and reduced effect of alpha-amylase on subsequent
                                                                                                                                  8106
                                                                                                                                                                                                                                                                                                                                                                                                             8166

The invention provides a novel method for directing self-assembly of a gene having three or more fragments in a directionally and spatially ordered fashion to produce a gene or a gene vector. The method involves usage of primers, containing class IIS restriction endonuclease recognition sites, for isolation of these fragments. As described in the disclosure, the method may also use a vector for the incorporation and screening of endogenous mouse promoter elements for the identification of screening of endogenous mouse promoter elements for the identification of cell specific promoters. In the example given, plasmids pBK-CMV (AAV33625), pVLMB (AAV33623) and pVLOVHGH-900 (AAV33621) were used as templates from which six fragments were amplified. Each of the fragments contained different regulatory sequences. The six PCR fragments were designed to self-assemble into a retro-vector using the method of the invention. The present sequence, designated as GENSA 981, represents the monomeric DNA sequence of the six ligated fragments. In general, the method is claimed to be useful for isolating and identifying regulatory sequences from a cell, including those for enhanced biological activity, or tissue-specific, hormone-specific or developmental-specific gene

The present invention relates to a method of performing a chemical reaction between reactants, which involves subjecting an emulsion comprising a discontinuous first phase in which at least one of the reactants is present, and a continuous second phase, to a physical or chemical change such that a continuous phase, to a physical or chemical change such that a continuous phase is formed from the discontinuous phase, and providing conditions in which the chemical reaction between the reactants takes place. A system for carrying out the method is also disclosed. The method is useful for performing a chemical reaction between reactants, where the chemical reaction is chosen from caction (LCR), rapid amplification of CDNA ends (RACE), reverser transcriptase PCR (RT-PCR), DNA fingertyping, DNA genotyping, condonuclease-restriction digest, DNA ligation, DNA phosphorylation, DNA conduclease-restriction digest, DNA ligation, BNA phosphorylation, and protein modification is glycosylation or phosphorylation or the chemical reaction is DNA sequencing or PCR. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3061

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The specification describes a polynucleotide that is capable of rolling circle replication (RCR) in an eukaryotic host. The polynucleotide comprises a Rep gene encoding from a virus, sequences that are cis on the polynucleotide such that the Rep protein can bring about RCR of the polynucleotide such that the Rep protein can bring about RCR of the polynucleotide such that the Rep protein of interest capable of being expressed in the host, and optionally a multiple cloning site, where the polynucleotide lacks genes of the virus. The virus is selected from the group of genera of family Geminiviridae, Circoviridae and Nanovirus. The polynucleotide sequence is useful for the discovery of the function of genes in eukaryotic hosts, and for inducing or enhancing a trait in a host eukaryotic cell, for down-regulating a gene in a plant or in mammalian cell and thus altering or even eliminating the function of that gene, as gene sequence delivery tools for mammalian genomic approaches, for gene therapy applications (for delivering therapeutic or complementing gene products to organisms or cells), and in whole animal genomics. The present sequence represents a construct comprising the whole PCV genome. This construct contains the PCV Rep gene under the transcriptional control of its own promoter, and has the putative coat protein inactivated by insertion of the bacterial cloning vector

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                   The present sequence is that of vector pCR-XL-TOPO-CMV-pur-attB, which was used in an example from the invention to demonstrate phic31 integrase - mediated integrated integrated integrated integrated integrated integrated are provides methods for using bacteriophage phic31 integrase to integrate a heterologous polymucleotide into the genome of an avian cell. In this compage integrases—mediated integration method, a pleamad vector bearing a transgene and including the attB recognition sequence for the phage integrase and including the attB recognition sequence for the phage integrase, or the integrase protein itself, are delivered into cells or embryos. The integrase protein itself, are delivered into cells or embryos. The integrase recognises DNA sequences in the avian genome similar to attP sites, termed pseudo-attP, and mediates continuation between attB and pseudo-attP sites, resulting in the permanent integration of the transgene into the avian genome. The invention also provides: a genetically transformed avian, a method of producing a polypeptide, a polypeptide of interest expressed by a genetically transformed avian cell or its progeny; an avian egg white comprising a heterologous polypeptide, an avian egg comprising a comprising a nethod for generating a genetically modified avian cell or its progeny using a tagged chromosome; a genetically cand a recombination site. The methods are useful in genetically transforming an avian cell for expressing, in large yields and at low cost, a wide range of dealted proteins including those used as madiations.

The production is progeny using a tagged chromosome; a genetically cand at low cost, a wide range of dealted proteins including those used as madiations and at low cost, a wide range of dealted proteins including those used as the area of the produce of the proteins including the proteins additions or livestock feed as a dealted because and at low cost, a wide range of dealted proteins including the proteins additions and at low cost, a wide range of dealted p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                6174
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3061

The invention relates to a polymucleotide capable of eliciting an immunisation reaction in a eukaryotic host to a peptide or polypeptide. Immunisation reaction in a eukaryotic host to a peptide or polypeptide. The polymucleotide encodes the peptide or polypeptide, and contains calcifor a viral genome (i.e. the Rep gene) that is capable of rolling circle replication. The peptide or polypeptide is capable of expression in the eukaryotic host. Also included are constructing a polymucleotide capable of eliciting an immunisation reaction in a host (comprising demonstration and immunisation reaction in a host (comprising demonstration administrating a composition comprising the polymucleotide into the host comprising administrating accordance of IgG antibody induction were capitation cassette versus immunogenic protein insert linked to a rolling circle replication mammalian expression vector. Levels of IgG antibody through successive bleeds were higher for both luciferase and cassette, as compared to non-rolling circle replication in a eukaryotic controlling circle replication in a eukaryotic host is useful in vaccine or gene therapy capplication in a eukaryotic host is useful in vaccine or gene therapy capplication in a eukaryotic host is useful in vaccine or gene therapy core the discovery of the function of genes in eukaryotic cell, or for eliciting an immunisation reaction in a eukaryotic coll, or trait in a host eukaryotic cell, or for eliciting an immunisation reaction in a eukaryotic coll, or trait in a host eukaryotic cell, or for eliciting an immunisation reaction in the host elicited by the function of that gene. The ancillary protein is useful for polymucleotide of the invention comprising the whole PCV Republication is useful elicities of the invention comprising the whole polymucleotide of the invention of the normal administration and electr

cell specific promoters. In the example given, plasmid VLSNO2, containi a circularily permuted mouse VLSO genome, was used in the construction single long terminal repeat (ITR) vectors used in the method of the invention. In general, the method is claimed useful for isolating and identifying regulatory sequences from a cell, including those for enhanced biological activity, or tissue-specific, hormone-specific or developmental-specific gene expression
                                                                                                                                                                                                                                                                                                                                3081 GCAAAAGGCCAGGAACCGTAAAAAGGCCGCGTTGCTGGCGTTTTTTCCATAGGCTCCGCCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention provides a novel method for directing self-assembly of a gene having three or more fragments in a directionally and spatially ordered fashion to produce a gene or a gene vector. The method involves usage of primers, containing class IIS restriction endonuclease recognition sites, for isolation of these fragments. As described in the disclosure, the method may also use a vector for the incorporation and screening of endogenous mouse promoter elements for the identification of

resents plasmid pVC0289, which was used to create incoding pig growth hormone releasing hormone eds encoding GHRH are used in the method of the cluon describes a method for improving or see. growth, lean body mass, Insulin-like viels, growth rate and milk production in an ing birth of an offspring. The method comprises coding GHRH, into cells of the female animal tion of the offspring under conditions where the syspersed. The method is useful of improving or for increasing growth hormone, lean body mass, siency, growth rate, ratio of somatotrophs to cells in a pituitary gland, and milk production delaying birth of an offspring. GHRH nucleic sed for diagnostic purspess in clinical medicine, sy, e.g. in treating growth-related disorders such m resulting from abnormalities in growth hormone

Nucleic acids encoding GHRH are used in the method of the invention. The specification describes a method for improving or enhancing characteristics e.g. growth, lean body mass, Insulin-like Growth Factor (IGF)-I levels, growth rate and milk production in an offspring, and for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1891
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3486 CAGGATTAGCAGAGCGAGGTATGTAGGCGGTGCTACAGAGTTCTTGAAGTGGTGGCGTAA 3545
delaying birth of an offspring. The method comprises introducing a vector, encoding GHRH, into cells of the female animal prior to or during gestation of the offspring under conditions where the nucleotide sequence is expressed. The method is useful of improving or enhancing animal growth, for increasing growth hormone, lean body mass, IGF-I levels, feed efficiency, growth rate, ratio of somatotrophs to other hormone-producing cells in a pituitary gland, and milk production in an offspring, and for delaying birth of an offspring. GHRH nucleic acids and vectors are used for diagnostic purposes in clinical medicine, both human and veterinary, e.g. in treating growth-related disorders such as hypoplituitary dwarfism resulting from abnormalities in growth hormone production, and in stimulating the growth and enhancing feed conversion efficiency of animals raised for meat, milk and egg production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCTGCATTAATGAATCGGCCAACGCGCGCGAAGAGGCGGTTTGCGTATTGGGCGCTCTTC

The invention relates to compositions and methods for plasmid-mediated supplementation. The method is useful for treating ansemia, tumour (such as adenoma, mast cell tumour, melanoma, sarcoma or solid tumour), immune dysfunction, carcinoma (benign or malignant), leukaemia, lymphoma or kidney failure, for preventing the development of metastatic tumour, for increasing total red blood cell mass, for reversing wasting, abnormal weight loss or suppression of lymphopoesis, in a subject, or for increasing weight gain in a chronically ill subject or, or for extending life expectancy for a chronically ill subject. The present sequence is TV-growth hormone releasing hormone (GiRH) plasmid DNA. This sequence is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3305
                                                                                                                                                                            The invention relates to compositions and methods for plasmid-mediated supplementation. The method is useful for treating anaemia, tumour (such as adenoma, mast cell tumour, melanoma, sarcoma or solid tumour), immune dysfunction, carcinoma (benign or malignant), leukaemia, lymphoma or kidney failure, for preventing the development of metastatic tumour, for increasing total red blood cell mass, for reversing wasting, abnormal weight loss or suppression of lymphopoesis, in a subject, or for increasing weight gain in a chronically ill subject or, or for suind-type growth hormone releasing hormone (GRRH) plasmid DNA. This sequence is used to illustrate the method of the invention
                                                   Treating anemia, immune dysfunction, tumor, increasing total red blood cell mass, reversing wasting or abnormal weight loss in subject, by administering nucleic acid construct encoding growth-hormone-releasing-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         crredeceraarcarecrearacererricerereraaarrerrareeeereaarree

Treating anemia, immune dysfunction, tumor, increasing total red blood cell mass, reversing wasting or abnormal weight loss in subject, by administering nucleic acid construct encoding growth-hormone-releasing-

Claim 4; Page 191-193; 212pp; English

The invention relates to compositions and methods for plasmid-mediated supplementation. The method is useful for treating anaemia, tumour (such as adenoma, mast cell tumour, melanoma, sarcoma or solid tumour), immune dysfunction, carcinoma (benign or malignant), leukaemia, lymphoma or kidney failure, for preventing the development of metastatic tumour, for increasing total red blood cell mass, for reversing wastatic, abnormal weight loss or suppression of lymphopoesis, in a subject, or for increasing weight gain in a chronically ill subject or, or for extending life expectancy for a chronically ill subject. The present sequence is TI ergrowth hormone releasing hormone (RHHH) plasmid DNA. This sequence is Ti used to illustrate the method of the invention
